

## Using graphs

- Interpreting distance–time graphs
- Drawing graphs based on real situations
- Recognising that some graphs can be misleading
- Giving possible explanations for the shape of graphs

You should know

explanation 1a

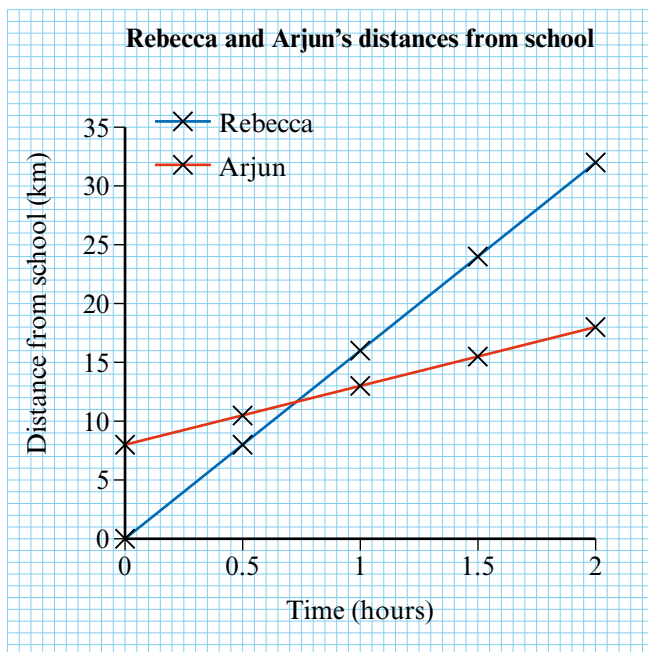

explanation 1b

- 1** The distance–time graph shows the distance Ben walked at a constant speed.

- a** How far did Ben walk in 5 hours?
- b** What was Ben's speed in kilometres per hour?
- c** Write an equation that links the distance Ben walked ( $d$  km) and the time he took ( $t$  hours).
- d** Ben continued to walk at this speed. Use your equation from part **c** to calculate how far Ben walked in 8 hours.
- e** Ben is going to do a walk for charity. The distance he has to walk is 34 km. Estimate how long he will take to walk the 34 km.

- 2** Rebecca was at school and Arjun was at his house 8 km away. Rebecca started cycling towards Arjun at a steady speed. At the same time, Arjun started walking in the same direction at a steady speed. This distance–time graph shows their distances from school.

- a** Approximately how long did Rebecca take to overtake Arjun?
- b** Explain how you arrived at your answer to part **a**.
- c** How far did Rebecca cycle in 2 hours?
- d** What was Rebecca's speed in kilometres per hour?
- e** How far did Arjun walk in 2 hours?
- f** What was Arjun's speed?
- g** Write an equation that links Rebecca's distance from school ( $r$  km) with time ( $t$  hours).
- h** Write an equation that links Arjun's distance from school ( $a$  km) with time ( $t$  hours).
- i** When Rebecca overtakes Arjun, they are the same distance from school, so  $r = a$ . By solving an equation, calculate the time that Rebecca took to overtake Arjun. Give your answer to the nearest minute.

- 3** Gethin and Abbie were 12 km apart. They started walking at the same time and walked towards each other. Gethin set off from point O. The distance–time graph shows their distances from O.

- a** What do straight lines mean on a distance–time graph?
- b** How far had Gethin travelled after 2 hours?
- c** What was Gethin's speed?
- d** Write an equation that links Gethin's distance from O ( $g$  km) with time ( $t$  hours).
- e** What was Abbie's speed?
- f** Write an equation that links Abbie's distance from O ( $a$  km) with time ( $t$  hours).
- g** How far apart were Gethin and Abbie after 1 hour?
- h** By solving an equation, calculate how long it took Gethin and Abbie to pass each other.

- 4** A plumber charges a £50 call out fee and then £25 for each hour worked. The table shows the cost of hiring the plumber for different lengths of time.

Number of Hours	0	1	2	3	4
Cost (£)	50	75	100	125	150

- a** Plot a graph showing the cost (£ $C$ ) of hiring the plumber against time ( $t$  hours).
- b** Write an equation that links the cost (£ $C$ ) and the time ( $t$  hours).
- c** Use your equation to work out how much the plumber would charge for a job lasting 1 hour 45 minutes.
- d** How long would the plumber have worked if he charged £280 for a job?

- 5** Two removal companies give a family a quote for helping them move house. Company A charges a fee of £100 and then £1.50 for each kilometre travelled. Company B charges a fee of £150 and then £1.30 for each kilometre travelled.

**a** Copy and complete this table of removal costs.

Distance (km)	0	25	50	100	200	500
Charge Company A (£)	100.00					
Charge Company B (£)	150.00					

- b** On the same axes, plot a line graph showing the charges for each company.
- c** Estimate the distance for which both companies charge the same amount.
- d** Write an equation that links the charge (£ $A$ ) and the distance ( $d$ km) for Company A.
- e** Write an equation that links the charge (£ $B$ ) and the distance ( $d$ km) for Company B.
- f** Calculate the actual distance for which both companies charge the same amount. Use your equations from parts **d** and **e**.
- 6** These graphs show the profits (in millions of pounds) of two companies.

- a** Which company has had the steepest rise in profits over the 10 years?
- b** What was the profit of Company X in 2007?
- c** What was the profit of Company Y in 2007?
- d** Check your answer to part **a** by looking at your answers to parts **b** and **c**.
- e** Are the graphs misleading? Justify your answer.

**explanation 2**

- 7** Water is poured at the same constant rate into each of these five containers.

Here are three graphs that show how the depth of water changes with time.

- a** Match three of the containers with their corresponding depth–time graphs.  
**b** Sketch the graphs for the two remaining containers.

- 8** This graph shows the temperature of a pan of water used for cooking frozen peas.

Give a possible explanation for the shape of the graph.

- 9** This graph shows the depth of water in a water barrel over a period of time.

Give a possible explanation for the shape of the graph.
