

## Reflection, rotation and translation

- Knowing that translations, rotations and reflections preserve length and angle and map on to congruent images
- Carrying out combinations of reflections, rotations and translations
- Finding the symmetry properties of two-dimensional shapes
- Identifying and sketching planes of symmetry of 3-D solids

Keywords

You should know

explanation 1a

explanation 1b

explanation 1c

**1** Copy each diagram. Reflect each shape in the line  $x = 2$ .

**2** Copy each diagram. Reflect each shape in the line  $y = x$ .

explanation 2a

explanation 2b

**3** Copy each diagram. Rotate each shape  $180^\circ$  about  $(0, 0)$ .

**4** Copy each diagram. Rotate each shape  $90^\circ$  anticlockwise about the point shown.

**5** In each diagram, shape B is the image of object A after a single rotation. Describe each rotation fully.

explanation 3a

explanation 3b

**6** Copy each diagram. Translate each shape by the translation given.

**a** Translation  $\begin{pmatrix} 5 \\ -8 \end{pmatrix}$

**b** Translation  $\begin{pmatrix} -4 \\ -7 \end{pmatrix}$

**7 a** X has been translated to each of the shapes A, B, C and D. Describe the translation that has taken place each time. The first one has been done for you.

X to A: translation  $\begin{pmatrix} 4 \\ 2 \end{pmatrix}$

**b** Describe the translation A to B. Explain how you could work out this translation from your answers to part **a**, without using a diagram.

explanation 4a

explanation 4b

- 8** Copy each diagram. Reflect each shape in the  $x$ -axis and then reflect each image in the  $y$ -axis.

**a**

**b**

**c**

**d**

**9** Look at your answers to question 8.  
What is the equivalent transformation for each combination of reflections?

**10** Copy the diagrams in question 8.  
Reflect each shape in the  $y$ -axis and then reflect each image in the  $x$ -axis.

**11** Look at your answers to question 10.  
What is the equivalent transformation for each combination of reflections?

**12** Copy each diagram.

**a i** Reflect the shape in the line  $x = 1$  and then reflect the image in the line  $y = -2$ .

**ii** What is the equivalent single transformation?

**b i** Reflect the shape in the line  $y = 3$  and then reflect the image in the line  $x = 3$ .

**ii** What is the equivalent single transformation?

**13** Copy this diagram onto squared paper.

- Reflect shape ABC in the mirror line  $M_1$ . Label the image  $A'B'C'$ .
- Reflect image  $A'B'C'$  in the mirror line  $M_2$ . Label this image  $A''B''C''$ .
- What do you notice about the lengths  $AA''$  and  $M_1M_2$ ?
- What single transformation is equivalent to the two reflections?

**14** Copy these diagrams. Draw the image of each shape after it has undergone the set of transformations given. Mark the image of point A and label it A'.

- Reflection in the y-axis and then translation  $\begin{pmatrix} -4 \\ -2 \end{pmatrix}$ .

- Rotation  $90^\circ$  clockwise, centre  $(0, 0)$ , and then translation  $\begin{pmatrix} 5 \\ 3 \end{pmatrix}$ .

**15** Repeat question 14, but this time carry out the transformations in the reverse order. What do you notice about your answers compared to your answer to question 14?

**16 a** Copy the diagram. Draw the image of the shape after the following set of three transformations. Mark the image of point A and label it A'.

Rotation  $180^\circ$  with centre  $(1, 0)$ ,  
then reflection in the  $x$ -axis,  
and then translation  $\begin{pmatrix} -4 \\ -4 \end{pmatrix}$ .

**b** Carry out the transformations in the reverse order. Mark the image of A and label it A''

**17** Find a combination of two transformations that will map these triangles onto each other.

- a** A onto C
- b** A onto D
- c** B onto C
- d** D onto A

**18** Write the single equivalent transformation for each of these repeated transformations. Give examples to show your answers are correct.

- a** Two rotations about the same centre
- b** Two translations
- c** Reflection in two parallel lines
- d** Reflection in two perpendicular lines

explanation 5a

explanation 5b

- 19** These shapes have different symmetry properties.

Rectangle

Parallelogram

Rhombus

Isosceles trapezium

Kite

Arrowhead

Trapezium

Copy and complete this symmetry table for the shapes.

		Number of lines of symmetry		
		0	1	2
Rotation symmetry	None		D	
	Order 2			

- 20** Copy these shapes.

a

Square

b

Equilateral triangle

c

Regular hexagon

d

Rectangle

e

Isosceles triangle

f

Parallelogram

- Mark any lines of symmetry on each shape.
- State the order of rotation symmetry of each shape.

- 21** State the order of rotation symmetry of these shapes.

a regular pentagon

b regular octagon

c circle

- 22** The diagrams show incomplete mosaic patterns. Each pattern has 4 coloured tiles missing. Copy and complete the patterns so that they have the stated symmetry properties.

**a** Two lines of reflection symmetry, and rotation symmetry of order 2.

**b** One line of reflection symmetry, and rotation symmetry of order 1.

#### explanation 6

- 23** Sketch these shapes and draw the planes of symmetry on them. You might want to draw them more than once.

**a**

**b**

**c**

**d**

**e**

**f**

- 24** A cube has 9 planes of symmetry. Draw diagrams to show them.
